

DE_Goettingen_Little_Round

RLV from AG Studio

Technical information:

Distance	35km,
Elevation gain	600m
Recorded on	12-10-2014
Camera	SJ4000
Format	1920x640
Encoding	H264
Framerate	30 fps

Route Description:

The RLV follows a short round loop in the east of Goettingen, We start in the southern neighbor village of Geismar, following for a few km the road towards Duderstadt. At the km 8 we turn left on a short climb introducing us to a section of smaller roads through the little settlements of Niedeck, Settenhausen, and Falkenhagen. After landolfhausen we follow for a few km a smooth climb in the fields leading us to Mackenrode. Once arrived in Waake we follow the B27 road which crosses the Goettingen hill, passing some construction sites. A fast descent precedes a short climb which ideally is the town door. The last climb follows the Bismarck Strasse bringing us to the finish line, set at the beginning of the Goettingen City Forest.

Curiosities:

The Bismarck Strasse leads to an observatory and a tower that, like many others in Germany, is also named after Otto von Bismarck (1815 - 1898), first chancellor of Germany. The affiliation suits particularly well for the city of Goettingen, where Bismarck was a student in the year 1832-1833.

Editing information:

This RLV has been recorded right after the video of the tour d'energie. Unfortunately the sun of that morning turned into a more gray light so I applied some color filters. As in the previous video, the camera is mounted inside the car, and time to time there are some reflections of the glasses. Editing and de-shaking were done using virtualdub. The GPS track has been edited with GPX track editor, while the synchronization was done with RLV-workbench.
